EDUCATION

Information and Computer System Technologist Diploma
Camosun College

January 2023 – April 2025
Victoria, BC

WORK EXPERIENCE

User Experience Design Co-op
Ministry of Education and Childcare

January 2025 – April 2025
Victoria, BC

- Maintained, improved, and tested a government website developed in Vue.js for handling BC students' records
- Implemented end-to-end automated website testing using Cypress to make sure microservices and each component of the website work together seamlessly without causing any issues
- Developed a parallelization test runner through containerization on GitHub Action for Cypress, enabling the load balancing of test execution into multiple runners that drastically improved overall testing efficiency
- Collaborated and communicated closely with the UI/UX team day to day while working with business areas to clarify the issues and the ideal solutions

Sushi Chef Assistant & Technical Assistant
Shizen Japanese Restaurant

March 2026 – Present
Victoria, BC

- Prepare and present sushi dishes while maintaining strict food safety and quality standards in a high-volume kitchen environment with strong teamwork and clear communication
- Built and maintain the restaurant's website and digital content system with Next.js and Sanity, enabling staff to update menu information easily.
- Assist with daily technical troubleshooting and website updates for the business

PROJECTS

Gomoku AI Agent | Python, React, Tailwind CSS, FastAPI, AWS EC2, ngrok | gomoku-web-agent.vercel.app

- Online Gomoku (Five in a row) game that integrates Gomoku AI with the minmax algorithm to play against hosted on Vercel and EC2 backend
- Developed the FastAPI backend that runs multiple instances of AI models asynchronously with automatic game timeout cleanup for resource preservation
- Built an auto-deployment script using GitHub Action that SSH into a running EC2 and restarts the service with an updated codebase on push

Restaurant Website | Next.js, Typescript, Sanity CMS | shizensushi.ca

- Build a responsive production restaurant website for a local sushi restaurant using Next.js and Typescript, based on the business owner's constant weekly feedback
- Developed a CMS-driven menu and content system to enable non-technical staff to easily update menu items, hours, and any content through a user-friendly dashboard using Sanity.io
- Improved performance and SEO using Next.js static generation and optimized assets
